Operations and is not part of the Official Record**

BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

- ☐ **BLACK BORDERS**
- ☐ **IMAGE CUT OFF AT TOP, BOTTOM OR SIDES**
- ☐ **FADED TEXT OR DRAWING**
- ☐ **BLURRED OR ILLEGIBLE TEXT OR DRAWING**
- ☐ **SKEWED/SLANTED IMAGES**
- ☐ **COLOR OR BLACK AND WHITE PHOTOGRAPHS**
- ☐ **GRAY SCALE DOCUMENTS**
- ☐ **LINES OR MARKS ON ORIGINAL DOCUMENT**
- ☐ **REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY**
- ☐ **OTHER:** _____

IMAGES ARE BEST AVAILABLE COPY.

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.

Unreliable software exposes software developers and distributors to legal risks. Under certain circumstances, the developer and distributor of unreliable software can be sued. To avoid lawsuits, software developers should do the following: determine what the risks are, understand the extent of the risks, and identify ways of avoiding the risks and lessening the consequences of the risks. Liability issues associated with unreliable software are explored in this article.

In today's society it is important for graduates of the computer science/information system programs to be able to interact with clients effectively. Students need to understand how a client feels and acts during the development of a software system. This paper describes the

organization, motive, and experience with an Application Development Course that addresses these issues.

Keywords: computer science education, software engineering

5 Software evolution in componentware using requirements/assurances contracts

Andreas Rausch

June 2000 **Proceedings of the 22nd international conference on Software engineering**

Full text available:  [pdf\(380.35 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In practice, pure top-down and refinement-based development processes are not sufficient. Usually, an iterative and incremental approach is applied instead. Existing methodologies, however, do not support such evolutionary development processes very well. In this paper, we present the basic concepts of an overall methodology based on component ware and software evolution. The foundation of our methodology is a novel, well-founded model for component-based systems. This mode ...

A number of activities involved in testing software are known to be difficult and time consuming. Among them is the isolation of faults once failures have been detected. In this paper, we investigate how the instrumentation of contracts could address this issue. Contracts are known to be a useful technique to specify the precondition and postcondition of operations and class invariants, thus making the definition of object-oriented analysis or design elements more precise. Our aim in this paper ...

Full text available:  [pdf\(1.87 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

Most SDEs are either *integrated toolsets* or *process-based environments*. Process-based environments have obvious advantages in support for the development process, while integrated toolsets have advantages in usability and convenience. By integrating the two approaches, the benefits of both are obtained. Direct integration, however, is not always possible, because the process engine's integration mechanism may conflict with that of the toolset. The solution is to center the environme ...

17 Verification, validation and accreditation: Capability maturity models support of modeling and simulation verification, validation, and accreditation

Candace L. Conwell, Rosemary Enright, Marcia A. Stutzman

December 2000 **Proceedings of the 32nd conference on Winter simulation**

Full text available:  [pdf\(418.67 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

Both government and industry are involved in the acquisition and development of modeling and simulation (M&S) products. The effectiveness and maturity of an organization's acquisition process directly affect the cost, schedule, and quality of the M&S products that are delivered to the user. When M&S program sponsors implement best practices throughout acquisition, critical verification, and validation (V&V) tasks can be conducted without inordinate cost. Department of Defense (DoD) Instruction 5 ...

18 Components: Building trust in third-party components using component wrappers in the .NET frameworks

Christine A. Mingins, Chee Y. Chan

February 2002 **Proceedings of the Fortieth International Conference on Tools Pacific: Objects for internet, mobile and embedded applications - Volume 10**

Full text available:  [pdf\(506.58 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Software purchasers are often provided with very sparse information about how to correctly deploy software components. We describe a novel contract-based approach to building trust in third party components. In contrast to the usual approach where contracts specifying the software semantics are constructed at the time of source code generation, we retrofit existing components with Contract wrappers. Sets of client requirements on the component are expressed in terms of software contracts using t ...

Keywords: design by contract, software components, software quality, wrappers
